COVERINGS FOR GREENHOUSES

Polycarbonate Twinwall Sheet

- Polycarbonate Twinwall Sheet is the perfect glazing choice for any greenhouse, translates its many unique features into cost saving benefits.
- Manufactured in North America.
- Heavy Gauge - increased strength and improved hail protection.
- Anti-Fog - prevents condensation build-up. Improved light transmission.
- 10 year warranty.
- Quick-ship and Cut-to-size programs.
- Up to 80% light transmission.

LEXAN Thermoclear

Polycarbonate Corrugated Sheet

- Polycarbonate Corrugated Sheet is a high quality, lightweight, rigid corrugated sheet, with excellent impact resistance, superior clarity, versatility and weather resistance.
- Polycarbonate Corrugated Sheet is coextruded with UV inhibitors which prevent degradation and yellowing of the material, and crops under the sheet are protected from the harmful rays of the sun.
- Built-in condensation control eliminates condensation drop formation, while retaining its high level of transparency.
- 4' and 6' wide in stock
- 10 year warranty

LEXAN

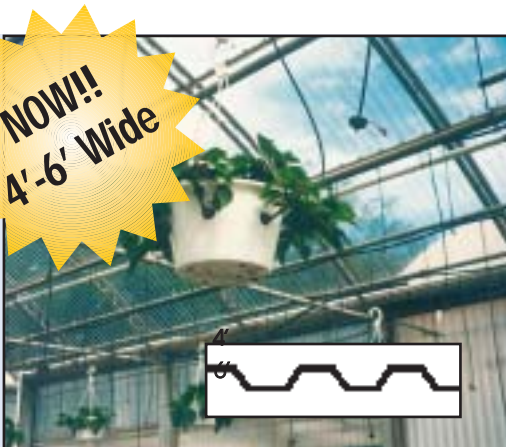

GT Performance Films

- Made from the toughest resin in the business, GT Films are made to order and be delivered when you need them, on time, in a hurry.
- GT-4 - "4 year" co-extruded film with excellent mechanical strength to provide maximum performance, longer life and enhanced efficiency.
- GT IR/AC- "4 year" co-extruded film with Infra-Red (IR) and Drip Control additives. This high performance grade of film absorbs infra-red radiation during the day, resulting in higher temperatures in the greenhouse compared to non-IR films (at night). This results in higher yields and lower heating costs. Drip Control coverings have excellent light transmission and clarity due to the absence of droplet formations accumulating on the interior of the greenhouse film.
- Film Fix, Tape, Double-Sided and Batten Tape extend film life.

Ask us about overwintering, 4 year white and other specialty films.

HORTIFABRICS

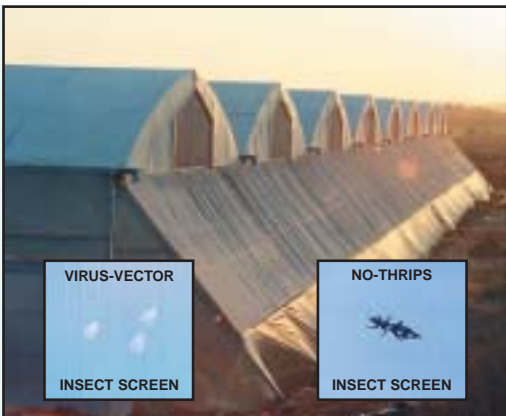

Thermal Screens

- **ALUMINET Thermal Screen** acts like a mirror, reflecting the sun's harsh radiation away from your valuable crops, employees and greenhouse coverings. Due to its superior reflectability, it does not absorb heat like black shade cloth, yet it creates a high quality shade with diffused, refracted light beneficial to plant health.
- Use **ALUMINET** over garden centers, for a creative merchandising appearance, as well as over commercial greenhouses, shade structures, as frost protection, or to help repel insects and birds.
- Ideal for Retractable Systems - Keep unwanted heat out during the day, and keep it in on cool nights.

Knitted & Woven Shade Cloth & Ground Cover

- **SHADE RITE Knitted Cloth** - Tough Lockstitch Knitted Construction which is UV stabilized for long life. Will not ravel or fray. Shade levels remain constant during product life. No edge taping and minimal sewing required. Can be cut and fabricated on site with no harmful effects. Can also be repaired, unlike other shade fabrics.
- **SHADE RITE Classic Woven Shade Cloth** meets the need for long lasting, economical shade. Monofilament polypropylene weave stands up to years of UV radiation AND WILL NOT STRETCH! All pieces are made to order with custom taped borders and 100% brass grommets.
- **COVER RITE Ground Cover** fabric stops weeds without harmful chemicals, yet the breathable woven construction lets water drain through. The 12" central green stripes allow for quick and easy alignment.

Insect Screens - Insect Exclusion

- Green-Tek's wide range of insect screen sizes and its excellent customer service ensure that your house will be "tight" against pests but remain cool. With thousands of installations currently in use, you can rely on our experience for the right fit. Choose stock or let our fabrication team customize it for your individual application.
- **Virus-Vector Insect Screen** - Most commonly relied upon insect screen in the world. Its patented monofilament rectangular weave maximizes the trade-off between exclusion and air flow - wide range of stock widths, cut to any length. Virus-Vector Insect Screen excludes Whitefly, Aphids, Leafminers and up to 80% of Thrips.
- **No Thrips Insect Screen** - The most exclusive screen available today, with a hole size of only 150 microns. Tough monofilament construction can be fabricated in any size. Our staff will assist with proper fit.
